PROFESSIONAL SUMMARY

Senior engineering and analytics professional with 20+ years in data analytics and 6+ years leading analytics initiatives. Technical expertise in designing and engineering scalable data solutions, data modeling, data processing, data transformation, data warehousing, and ETL/data pipelines using SQL and Python to deliver high-quality, production-grade data and BI ensuring data quality and data privacy. Experienced in advertising analytics, compliance and data governance, and building self-service dashboards and AI-driven automations (Power BI, Power Automate, Power Apps, Microsoft Copilot Studio) that produced multimillion-dollar business impact. Strategic partner who embeds directly with the teams that depend on the systems, thrives in ambiguous 0-1 settings, and delivers with minimal oversight.

TECHNICAL SKILLS

- SQL/KQL (15+/ 5+ years) – Complex querying, data modeling, large-scale analysis
- Microsoft Fabric & SSIS (10+ years) – ETL/Data Pipelines, SQL Databases, Lakehouses
- Power BI & DAX (10+ years) – Interactive dashboards, reporting, visualization
- Python (Recent hands-on & growing) – Data manipulation, scripting, automation, predictive modeling with scikit-learn and pandas
- Data Science (Portfolio) – Predictive modeling, survival analysis, feature engineering, model validation and calibration; Python, scikit-learn, pandas
- SSMS & VS Code (10+ years) – Data modeling, analysis, AI-assisted coding; Claude Code/Copilot CLI
- Azure Platform Services (5+ years) – Function Apps, Logic Apps, Data Factory, serverless automation
- Power Platform (7+ years) – Power Apps, Power Automate, Dataverse, solution ALM & deployment pipelines
- Microsoft Copilot Studio – AI agents, low-code intelligent automation
- Azure DevOps (10+ years) – Plan, build, test, and deploy solutions
- MS Office Suite (20+ years)

PROFESSIONAL EXPERIENCE

Microsoft | Reno, NV

Forward Deployed Engineer | Frontier AI, Business Operations

Aug 2026 – Present

- Embedded with business teams to design and ship a Dataverse-based intake and workflow platform — automated routing, approvals, and audit history — replacing a fragmented manual process and cutting over in-quarter.
- Root-caused a deployment defect that silently overwrote production configuration on every release, corrupting downstream data with no error surfaced; scripted the remediation across 11 broken connections and restored integrity without a rollback.

- Built AI-assisted automation to synchronize work-tracking state and delivery alerts across systems, replacing recurring manual triage with an automated pipeline.

Senior Data Analyst | Fusion Development, Operations Service Center

Aug 2022 – Jul 2026

- Engineered scalable licensing data models, automated workflows, and developed Power Apps, automating anniversary/mid-term ordering and saving 4,300+ hours annually while enabling 3x business scaling over 2 years.
- Developed compliance analytics metrics and Power BI dashboards for visibility into \$3.2B+ agreement portfolio health, driving \$106M increase in on-time renewals through automated reporting and deep-dive analysis.
- Designed agreement complexity models to identify bottlenecks via rigorous data analysis, enabling targeted root-cause investigations, process enhancements, and scalable automation for ad-hoc requests.
- Built custom AI automation solutions with Copilot Studio to facilitate stakeholder self-service, integrate disparate data sources, reduce manual analytics effort, and accelerate insights in a dynamic environment.

Business Analytics Specialist | Business Process & Analytics, Commercial Ops

Aug 2018 - Jul 2022

- Led global analytics backlog prioritization using Cost of Delay/Weighted Shortest Job First in SAFe framework, ensuring timely deployment of high-impact BI solutions across software licensing, advertising, and supply chain segments.
- Consulted with cross-functional stakeholders to define requirements and deliver scalable BI dashboards/analyses that informed decisions, improved transactional efficiency, and supported new program launches.
- Developed automated reporting pipelines and self-service tools enhancing operational effectiveness in diverse areas including digital attach, hardware compliance, search, and advertising.

Business Operations Analyst | Process Management, Commercial Ops

Jun 2015 – Jul 2018

- Crafted data-driven business cases using DMAIC and Agile methodologies, substantiating enhancements that reduced costs by \$31M, diminished AR exposure by \$400M, and enabled \$5.7B revenue.
- Engineered BI solutions and monitoring dashboards to track key objectives/outcomes of process/system improvements.

Bank of America | Reno, NV

Aug 2010 – May 2015

Vice President, Consumer Products Strategic Manager | Loan Loss Mitigation and Portfolio Analytics

- Led analytics team in loan modification campaigns, remediating \$60B+ portfolio and supporting \$25B+ in government programs via advanced BI solutions and reporting.

- Managed BI strategy, reporting, and operational processes for Enterprise Complaint Resolution, covering mortgage, credit card, and deposit product escalations from state AGs, elected officials, CFPB, OCC, and other regulatory bodies.
- Managed a team of 4 senior analysts and coordinated efforts of 8 operational managers across loan modification and complaint resolution programs.
- Built and automated enterprise-grade BI and data warehouse supporting marketing, production, modeling, forecasting, and operational decision-making across proprietary and government programs.
- Measured loan modification campaign performance against control holdout groups to isolate treatment effect; analyzed portfolio risk, losses, delinquency roll rates, payment shock, rate resets, and FICO vintage trends, interpreting results for executive leadership.

Charles Schwab Bank | Reno, NV

Aug 2003 – Aug 2010

Finance Manager, Bank Finance

- Led analytics infrastructure modernization, serving as SME for MS Access → SQL Server migration.
- Enhanced and managed loan pricing models; executed pricing exception decisions using ROE, spreads, cost of funds, LTV, FICO, and credit history.
- Produced executive-level reporting for the Board of Directors, ALCO, and Credit Risk Management Committee.
- Designed delinquency roll-rate, industry comparison, and portfolio vintage analytics to assess performance and risk trends.

TECHNICAL PROJECTS

Carrier Survival Model — github.com/gregchedwick/carrier-survival

2026 – Present

- Built and validated a discrete-time survival model predicting 12-month motor carrier failure across 1.9M carriers and 11.8M carrier-months using Python, scikit-learn, pandas, and Parquet — 0.889 AUC against a 0.748 baseline, 6.7x lift over a 2.2% base rate.
- Designed controlled validation experiments — a two-variable baseline as control, carrier-level holdout splits, and a planted-leak trial proving the leakage detector could fire — establishing that the full feature set beat the control by +0.142 AUC, and calibrated predictions to 0.0008 expected calibration error.
- Automated ingestion of 24M+ public federal records via REST API with ordered paging and schema-drift handling; 33 unit tests in pytest and a scheduled monthly refresh, interpreting anomalous model output back to 13 silent data defects in the source, each now regression-tested.

Netflix Ad Inventory Analytics — github.com/gregchedwick/Netflix-Ads-Analytics

2026

- Built an ad-inventory opportunity model for a streaming ad-supported tier, merging a 32,000+ title catalogue with global top-500 viewership data to rank where advertising spend was worth placing; delivered as an interactive Power BI dashboard and a published analysis site (Astro, TypeScript, GitHub Actions CI/CD).

EDUCATION

University of Nevada | Reno

May 2013

Master of Business Administration, GPA: 4.0

Relevant Coursework: Data Resource Management, Information & Communication Technology, Strategic Management

California State University East Bay | Hayward, CA

May 1998

B.S. Business Administration, Minor in Computer Science
